

iTOP Introductory

WHAT IS iTOP?

iTOP - individually Trained Oral Prophylaxis makes successful life-long oral hygiene possible!

iTOP stands for training to achieve nearly perfect oral hygiene. It includes the motivation to implement what's been learned new every day, and pass it onto the patient. iTOP helps promote individual oral health and healthy teeth - lifelong!

PROGRAMME

The seminar is split up into theoretical and practical work sessions.

The theoretical part covers the arguments behind the iTOP philosophy and the criteria for selecting tools and techniques. This lecture is the basis for the second, practical part of the seminar.

In this part, participants will receive practical instructions and work in small groups. During Touch to Teach (T2T) sessions, participants will learn and practice implementation and instruction skills.

In order to pass the iTOP Introductory Seminar, you need to take part in the theoretical and practical T2T sessions in full.

LECTURERS

The seminar is held by certified iTOP Lecturers and Instructors.
